

OSTree

Atomic Upgrades and the
Development Community

FSOSS 2018

Robert Fairley

OSTree

- “git for operating system binaries” [1]
- **file checkouts via hardlinks**

```
[rob@localhost demo]$ ls -li dir1/foo.txt
928716 -rw-rw-r--. 1 rob rob 4 Oct 21 20:56 dir1/foo.txt
[rob@localhost demo]$ ln dir1/foo.txt dir2/bar.txt
[rob@localhost demo]$ ls -li dir1/foo.txt dir2/bar.txt
928716 -rw-rw-r--. 2 rob rob 4 Oct 21 20:56 dir1/foo.txt
928716 -rw-rw-r--. 2 rob rob 4 Oct 21 20:56 dir2/bar.txt
```

Usual layout

OSTree-based deployment

OSTree Commands Demo

<https://asciinema.org/a/208112>

Why useful?

- Atomic upgrades by “checking out” the newer filesystem tree
- Handles *recording* of files and their *movement*; no concept of how a filesystem should be laid out
- **libostree** - base for hybrid technologies such as **rpm-ostree**

```
...  
ostree_commit_get_parent (1);  
ostree_commit_get_content_checksum (1);  
ostree_check_version (1);  
ostree_deployment_new (6);  
ostree_deployment_get_osname (1);  
ostree_remote_get_name (1);  
ostree_repo_new (1);  
... [2]
```

[2] library functions in <https://github.com/ostreedev/ostree/tree/master/src/libostree>
